Technical Projects

Game Nexus

- Developed a Game store site application using React.
- Functionality included an admin screen and shopping cart checkout.
- Managed global/local states and passed data between components.
- Utilized Google Firestore for database hosting and Netlify for Deployment.

Good Eats

- Developed a food recipe website using PHP.
- Created admin pages to manage data and search indexer to query recipes.
- Passed data between components to populate site content.
- Hosted recipe data using MySQL through Bluehost.

Drexel Homework Interface

- Worked with a student team to help redesign/develop a department homework submission interface.
- Created a design system/prototype in Figma.
- Created/managed components that were implemented in the final build.

Epic Games Microinteraction Redesign

- Developed a multi-tiered microinteraction focused on the game store section of the site using HTML/CSS/JavaScript.
- Interactions included complex, multi-leveled hover states, movement animations, and modal implementations.
- Utilized plugins like Bootstrap & Anime.js to heighten the quality and polish of my interactions
